

Library Automation

Library is automated through GTECH Library Software. The software was updated in 2019 in version 2.0 from the GTECH Informatics and bar-coding facility was added to it. Before this barcode facility was not available. Now the books are bar-coded. Through automation the record of library material is maintained in the software and various reports can be generated. The process of creation, storage, retrieval and management of bibliographic records has become easy. Issue and return process of library material can be done through the software. Online public access to catalogue through author/ title/subject search is available for readers to search the database. The software is very simple to search for undergraduate students and is based on local search requirements of readers. Books are entered accession-wise in the software and full bibliographic information is recorded in the database including class number and ISBN number, price, publisher etc. Location of document is also recorded in the software for easy access.
